Salesforce Developer – NM Eng

CUSTOMER SUPPORT TICKET PRIORITY PREDICTION AND AUTOMATED ASSIGNMENT SYSTEM USING AGENTFORCE

Team Lead: Sivagiri S

Team member: Naveen Kumar P

Team member: Ananth K

Team member: Belfin E Jinish

Team member: Rajahan R

User Story:

The Customer Support Ticket Priority Prediction and Automated Assignment System uses Salesforce and Agentforce to analyze customer support ticket descriptions, automatically determine priority as High, Medium, or Low, and trigger backend automation for appropriate support handling. The solution uses the Support Ticket Intelligence custom object, an Auto-Launched Flow, and an Agentforce subagent named Support Ticket Priority Analysis. High-priority tickets create an urgent handling task and are assigned to a senior support agent, reducing manual effort and improving response time.

1. INTRODUCTION

1.1 Project Overview :

Customer support teams receive a large number of tickets daily, while prioritization and assignment can be manual. This project provides a Salesforce-based solution that analyzes ticket information, classifies urgency, assigns the appropriate support level, and initiates automation for critical cases.

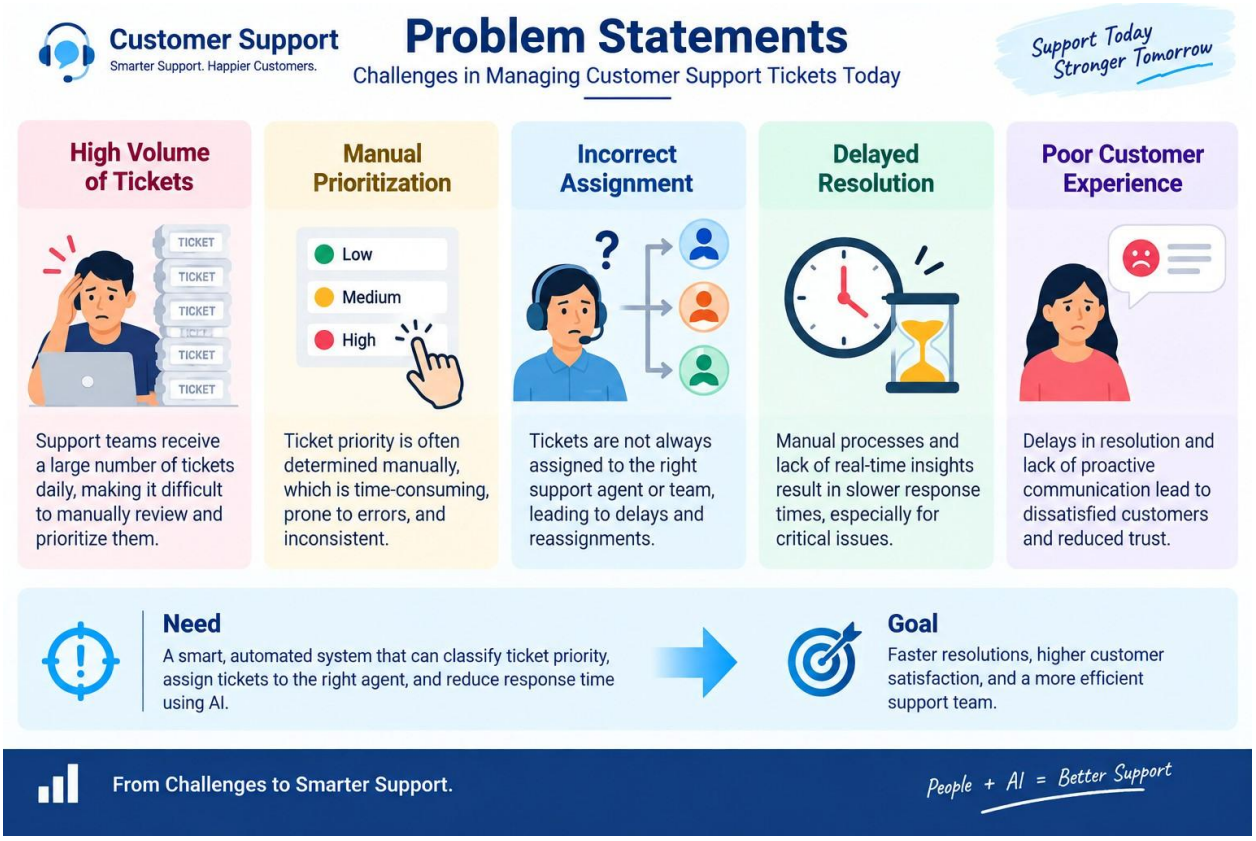

1.2 Purpose :

- Automatically classify support tickets as High, Medium, or Low priority.
- Retrieve the latest support ticket associated with a customer Account.
- Reduce manual prioritization and assignment effort.
- Create an urgent handling task for High-priority tickets.
- Use Agentforce to analyze ticket details and trigger backend automation.
- Improve ticket response and resolution efficiency.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

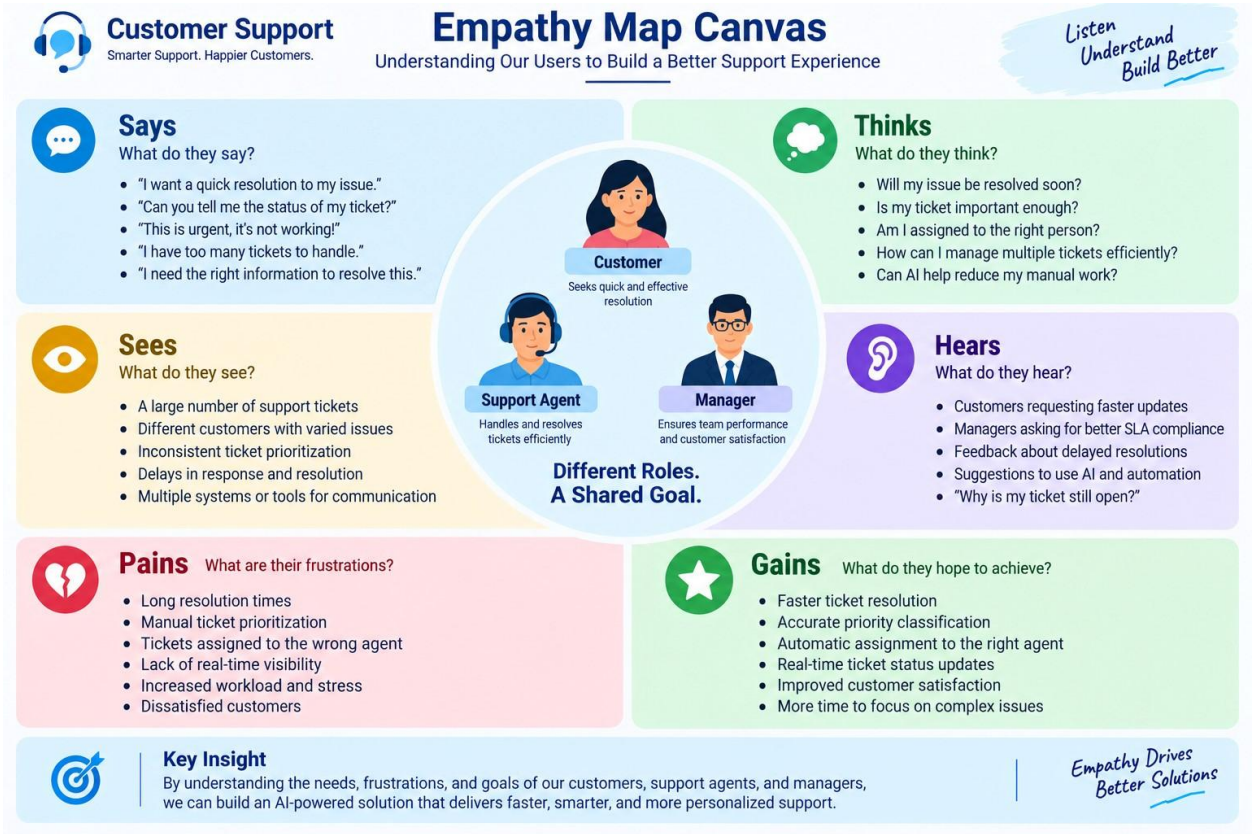

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Support Agent	focus on critical tickets first	tickets are not always prioritized automatically	ticket prioritization can be manual	frustrated
PS-2	Customer	get urgent issues resolved quickly	critical issues may wait behind lower-priority tickets	support teams handle large ticket volumes	concerned
PS-3	Support Manager	assign tickets to the right support level	assignment may require manual decisions	ticket urgency is not consistently analyzed	overwhelmed
PS-4	Support Agent	identify urgent issues from descriptions	important keywords can be missed	ticket descriptions contain different urgency signals	uncertain
PS-5	Support Manager	reduce SLA-related risk	older unresolved tickets may remain unnoticed	SLA risk needs additional checking	concerned

2.2 Empathy Map Canvas

User Persona: Support Agent

- **Think & Feel:** Wants critical issues identified quickly so urgent customer problems receive attention.
- **Hear:** Receives customer issue descriptions and support requests.
- **See:** Ticket status, issue type, description, priority level, assignment, and SLA risk.
- **Say & Do:** Reviews tickets, handles assigned cases, and focuses on urgent support issues.
- **Pain:** Manual prioritization, missed urgency signals, and delays in handling critical tickets.
- **Gain:** Automatic priority classification, clearer assignment, urgent-task creation, and reduced manual effort.

2.3 Brainstorming & Idea Prioritization

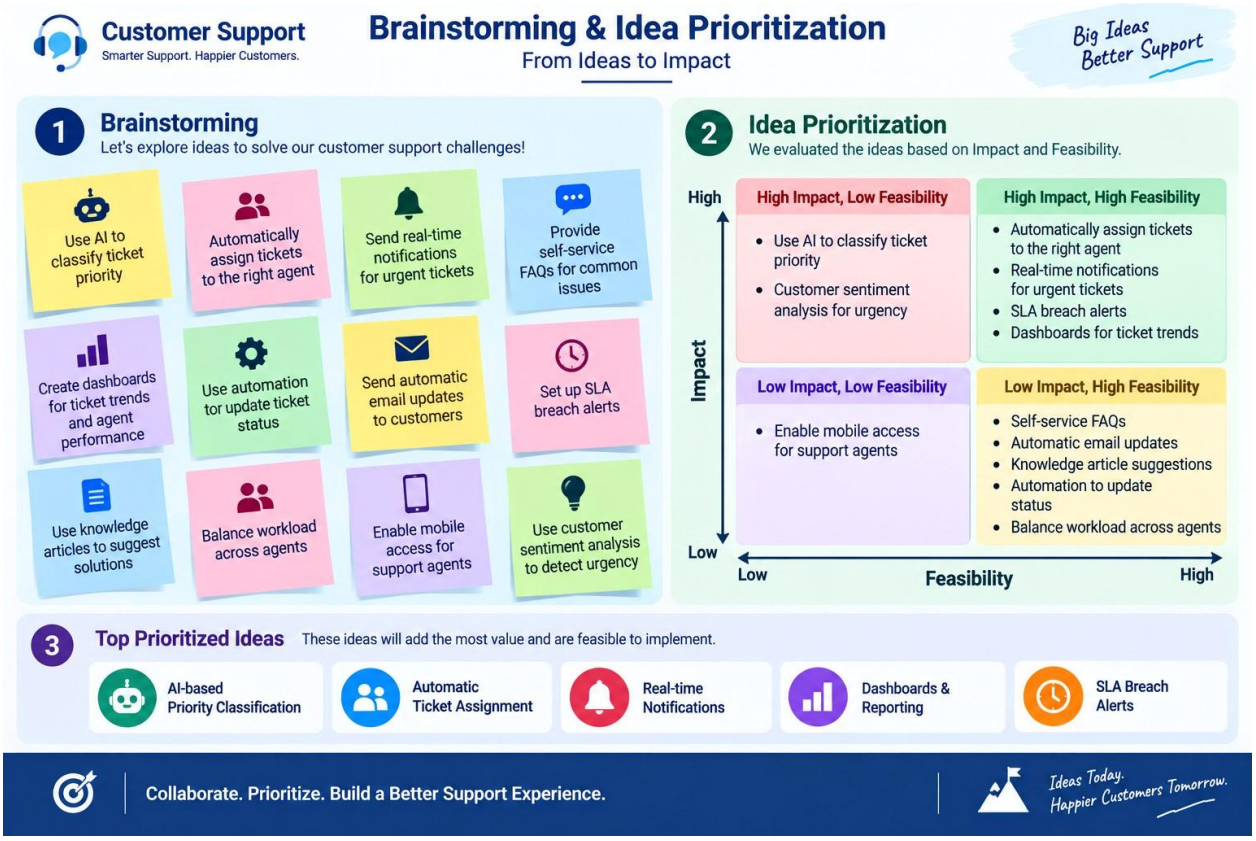

Ideas Considered

- Manual ticket registers
- Spreadsheet-based ticket tracking ● Standalone support portal
- Salesforce CRM with Agentforce

Final Selection

Salesforce CRM selected due to:

- Automation through Salesforce Flow
- AI-assisted ticket analysis through Agentforce
- Automatic priority classification
- Automatic urgent-task creation
- Reduced manual support effort

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stages:

- Ticket Creation → Account Identification → Ticket Retrieval → Description Analysis → Priority Classification → Agent Assignment → Urgent Task Creation → Support Handling → Resolution

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	Support ticket creation and management
FR-2	Account and Contact association
FR-3	Ticket description analysis
FR-4	Automatic priority classification
FR-5	High-priority task creation
FR-6	Support agent assignment
FR-7	SLA breach risk checking

FR-8	Agentforce conversational analysis

Non-Functional Requirements

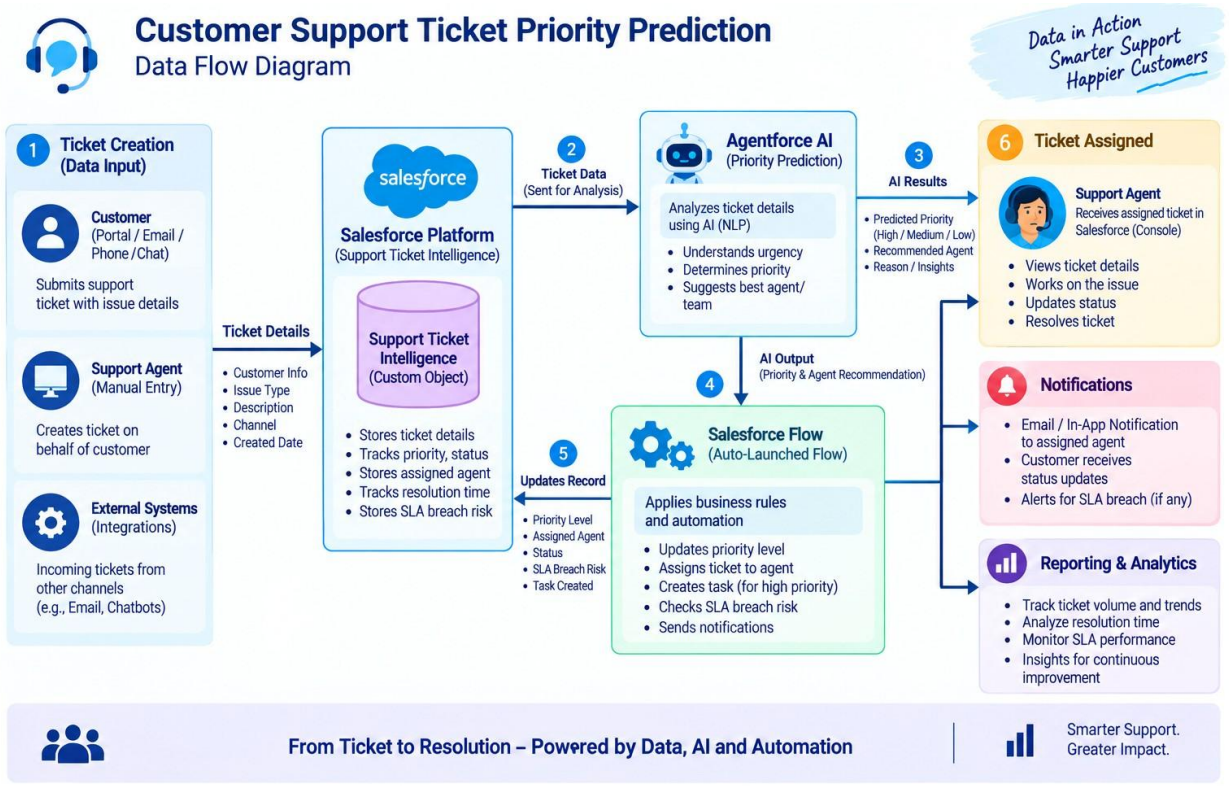

NFR	**Description**
Usability	Clear Agentforce interaction and understandable priority messages
Reliability	Consistent priority classification based on configured conditions
Performance	Quick retrieval and analysis of the latest support ticket
Security	Controlled Salesforce access to customer and ticket information
Maintainability	Flow and Agentforce configuration can be updated
Scalability	Supports increasing support-ticket volumes through Salesforce automation

3.3 Data Flow Diagram

Flow:

Customer / Support Request → Account → Latest Support Ticket → Ticket Description → Analyze Description → Priority Level → High/Medium/Low Decision → Agent Assignment → High-Priority Task (if applicable) → Final Response

Agentforce: User provides Account Name → Agentforce Support Ticket Priority Analysis → Auto-Launched Flow → Ticket Analysis → Priority and Assignment Output → Response to User.

3.4 Technology Stack

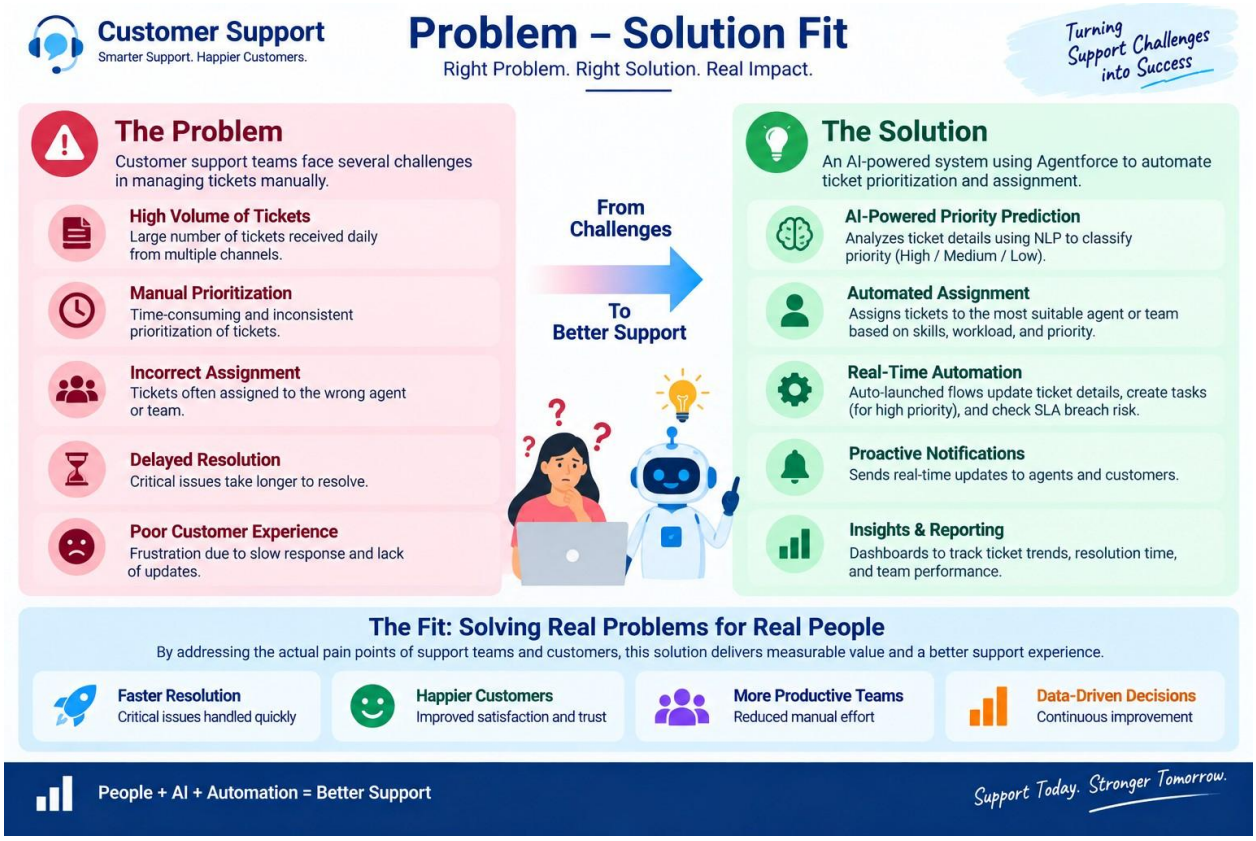

Layer	**Technology**
Platform	Salesforce
Database	Support_Ticket_Intelligence__c with Account, Contact, User and Task records
Logic	Auto-Launched Flow
AI	Agentforce
Agent Configuration	Support Ticket Priority Analysis subagent

Automation	Flow Decision, Assignment and Create Records
Output	Agentforce conversation response

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

Problem	**Solution**	**Benefit**
Manual ticket prioritization	Flow analyzes description and sets priority	Faster identification of urgent cases
Urgent issues may be missed	High-priority keyword decision	Critical cases receive attention
Manual task creation	Flow creates Task for High priority	Reduced manual effort
Manual support assignment	Flow sets assigned support level	More consistent handling
SLA risk can be overlooked	Optional SLA Risk decision	Better risk awareness
Need for conversational access	Agentforce subagent	AI-assisted interaction

4.2 Proposed Solution

Functional Requirements

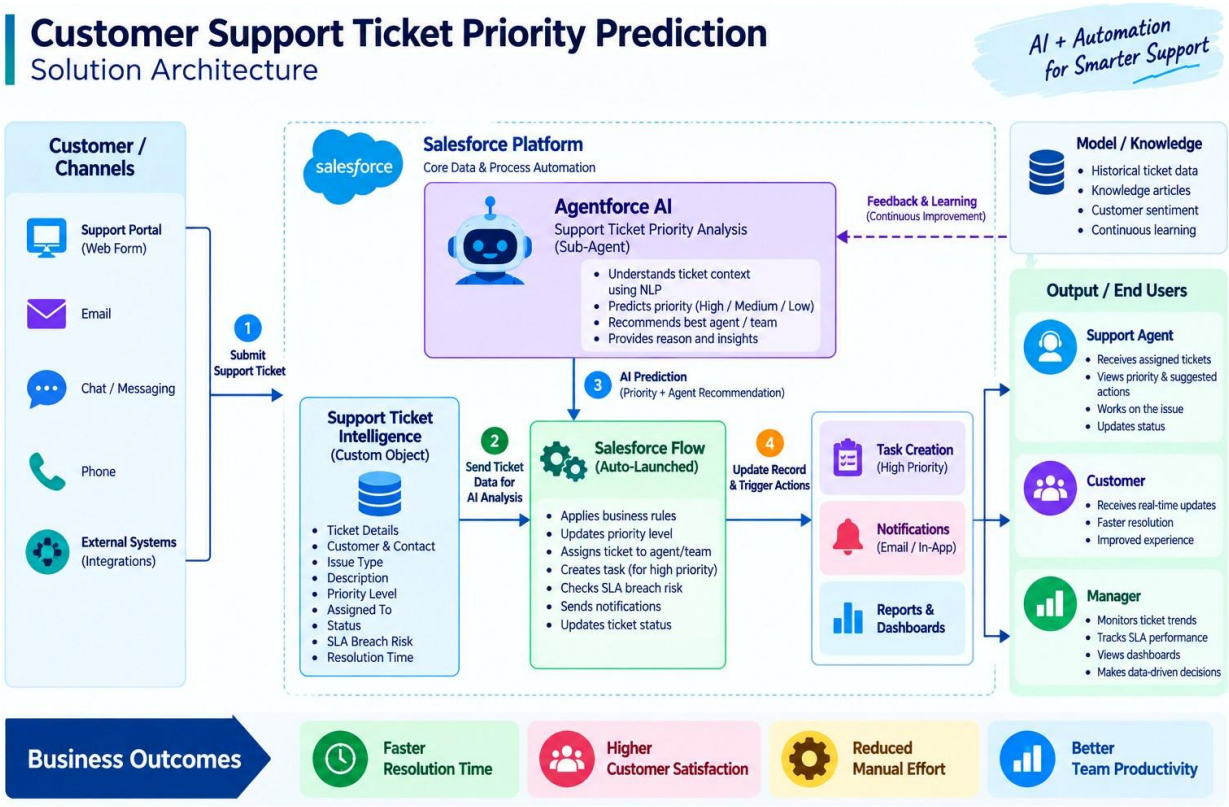

Parameter	Description
Problem	Manual ticket prioritization and assignment causing delays in handling critical customer support issues
Solution	Salesforce-based Customer Support Ticket Priority Prediction and Automated Assignment System

Innovation	Agentforce AI + Auto-Launched Flow for analyzing ticket descriptions, automatically classifying priority,
	assigning support level, and triggering urgent-task automation
Impact	Faster identification of critical tickets, reduced manual effort, improved response time, and better support-team productivity
Business Model	Customer support operations involving customers, support agents, support managers, and AI-assisted ticket handling
Scalability	Supports increasing support-ticket volumes through Salesforce automation, with scope for additional assignment rules, SLA monitoring, and priority indicators

4.3 Solution Architecture

Components:

Users / Support Team → Agentforce → Support Ticket Priority Analysis → Auto-Launched Flow → Account & Ticket Data → Description Analysis → Priority Decision → Task / Assignment → Final Message → Agentforce Response

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to configure the Salesforce environment for Support Ticket Intelligence so that the support	3	High	Member1

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
			automation solution can be developed.			
Sprint-2	Data Modeling	USN-2	As an admin, I want to create the Support Ticket Intelligence object with required fields and relationships so that customer support ticket information is stored systematically.	5	High	Member2
Sprint-2	Data Modeling	USN-3	As a support user, I want support tickets to be associated with Accounts and Contacts so that the latest customer ticket can be identified for analysis.	3	High	Member3
Sprint-3	Automation	USN-4	As a support agent, I want an Auto-Launched Flow to retrieve the latest ticket and analyze its description so that ticket priority can be determined automatically.	5	High	Member4
Sprint-3	Automation	USN-5	As a support agent, I want tickets to be automatically classified as High, Medium, or Low based on configured urgency conditions so that critical issues receive attention first.	5	High	Member4
Sprint-4	Agentforce & Automation	USN-6	As an AI Agent (Agentforce), I want to analyze support ticket details and trigger the backend Flow so that manual ticket prioritization is reduced.	8	High	Member1
Sprint-4	Task & Assignment	USN-7	As a support manager, I want High-priority tickets to automatically create an urgent handling task and assign the appropriate support level so that critical tickets are handled quickly.	5	High	Member2
Sprint-5	SLA Management	USN-8	As a support manager, I want the system to check SLA breach risk for older unresolved tickets so that potential SLA issues can be identified.	5	Medium	Member3

Sprint-6	Agentforce & Conversational Support	USN-9	As a support user, I want to provide an Account Name to Agentforce and receive the ticket ID, priority, assigned agent, and action message so that I can understand the ticket handling outcome conversationally.	5	Medium	Member4

Sprint	**Total Story Points**	**Duration**	**Sprint Start Date**	**Sprint End Date (Planned)**	**Story Points Completed (as on Planned End Date)**	**Sprint Release Date (Actual)**
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		

Project Tracker, Velocity & Burndown Chart: (4 Marks)

6. Project Development Phase:

What you'll learn

1. Data Modelling
2. Fields and Relationships
3. Lightning App Builder
4. Record Triggered Flows

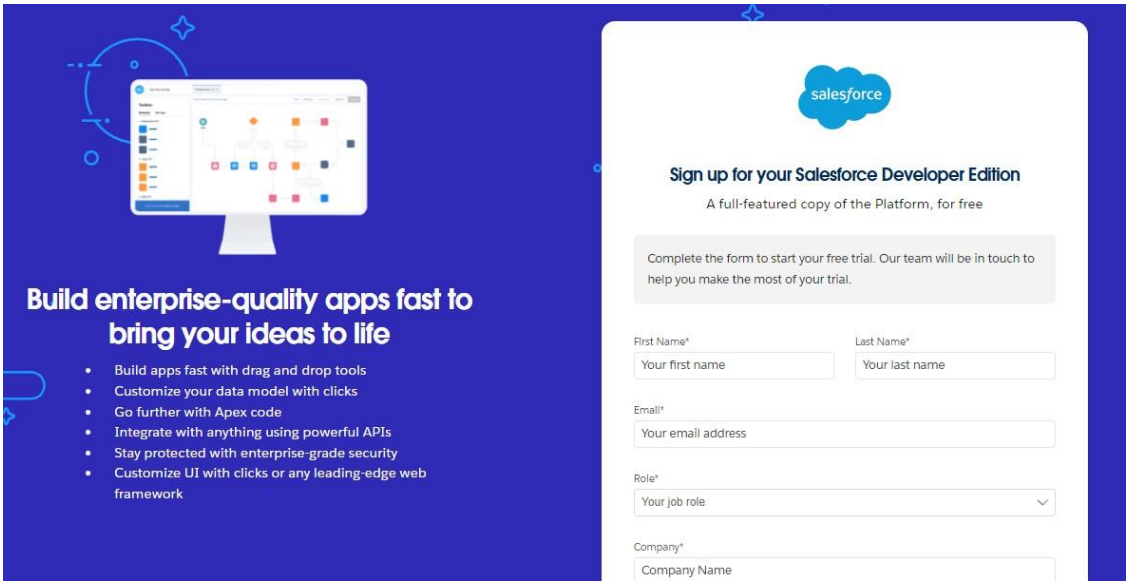

5. Apex and Apex Triggers
6. Batch Apex
7. Scheduled Apex

Milestone 1: Salesforce Account

Activity 1: Creating Developer Account

Creating a developer org in salesforce.

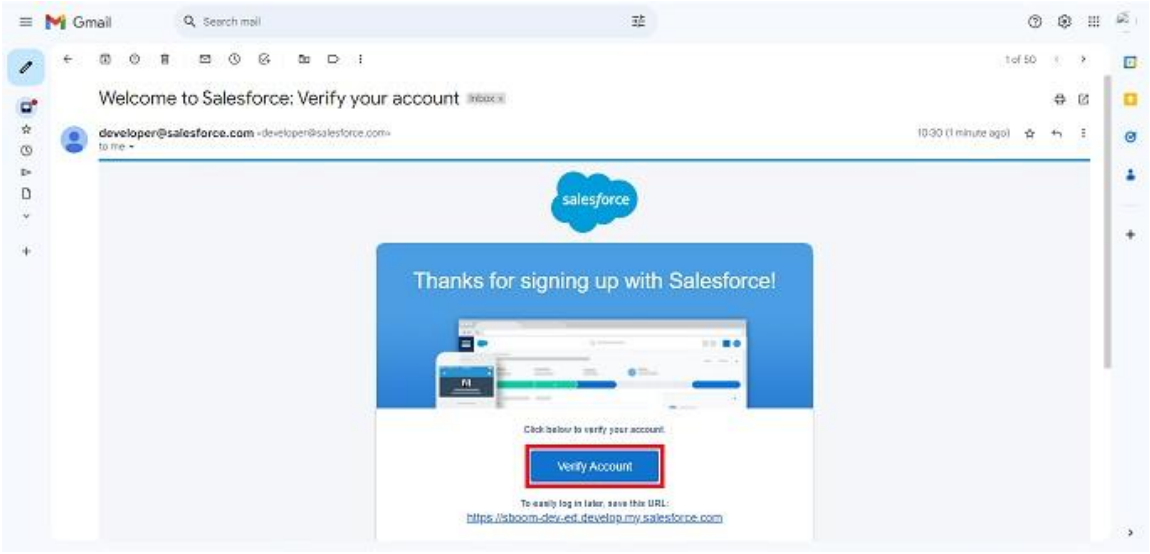

1. Go to https://developer.salesforce.com/signup
2. On the sign up form, enter the following details :

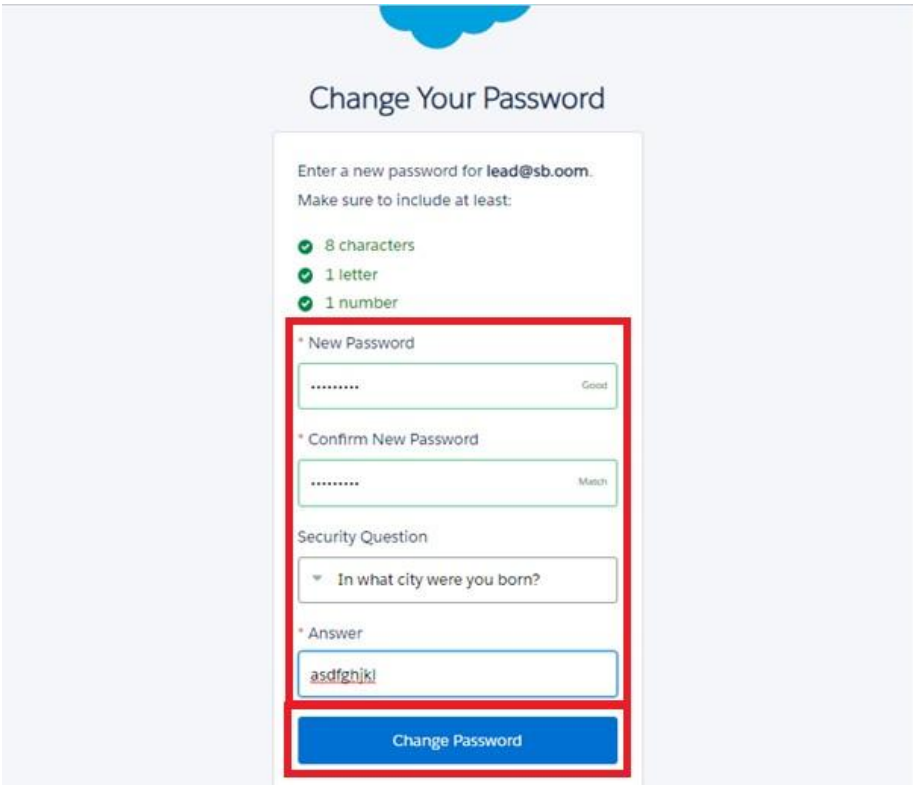

1) First name & Last name
2) Email
3) Role : Developer
4) Company : College Name
5) County : India
6) Postal Code : pin code
7) Username : should be a combination of your name and company This need not be an actual email id, you can give anything in the format : username@organization.com Click on sign me up after filling these.

Activity 2: Account Activation

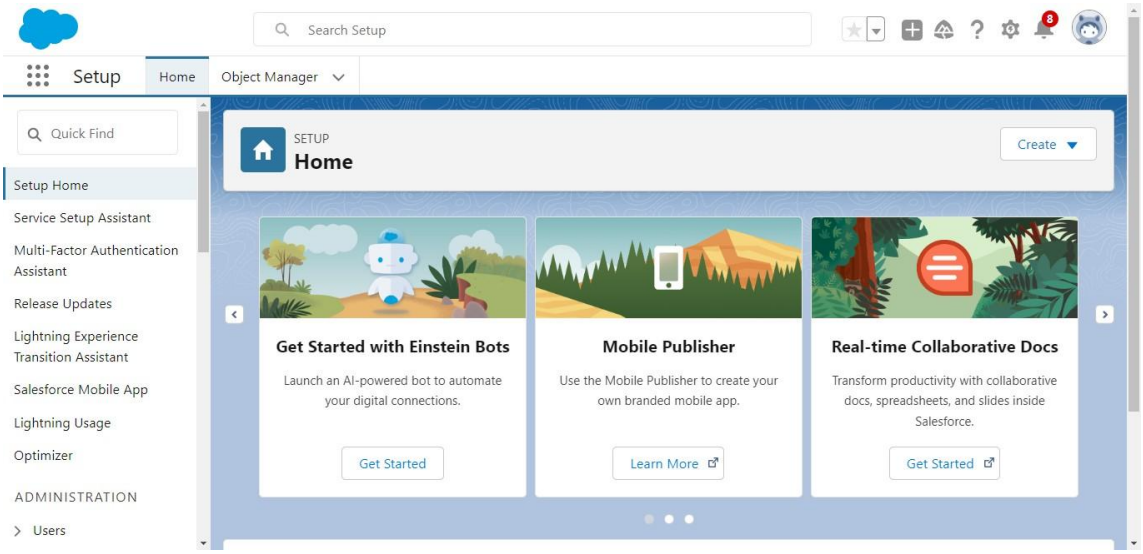

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account
3. Give a password and answer a security question and click on change password.

4. Then you will redirect to your salesforce setup page.

Milestone 2: Data Management-Objects

Custom Object

Object Name:

Support Ticket Intelligence

API Name:

Support_Ticket_Intelligence__c

Fields

Field Label	API Name	Data Type	Description
Ticket Number	Ticket_Number__c	Auto Number	TKT-{0000}
Customer	Customer__c	Lookup (Account)	Related Account

Contact	Contact__c	Lookup (Contact)	Customer contact
Issue Type	Issue_Type__c	Picklist	Technical, Billing, General
Description	Description__c	Long Text Area	Issue details
Priority Level	Priority_Level__c	Picklist	Low, Medium, High
Status	Status__c	Picklist	New, In Progress, Resolved
Created Date	Created_Date__c	Date	Ticket date
Assigned To	Assigned_To__c	Lookup (User)	Support agent
SLA Breach Risk	SLA_Breach_Risk__c	Checkbox	Risk flag
Resolution Time (hrs)	Resolution_Time__c	Number	Time taken

Auto-Launched Flow Logic (Modified for this Project)

1. Flow Type

Auto-Launched Flow (No Trigger or called from Agentforce)

2. Variables

Input Variable

Label	API Name	Type	Input

Account Name	varAccountName	Text	Yes

Output Variables

Label	API Name	Type	Output
Account Id	varAccountId	Text	Yes
Ticket Id	varTicketId	Text	Yes
Priority Level	varPriorityLe vel	Text	Yes
Assigned Agent	varAssignedTo	Text	Yes
Action Message	varActionMess age	Text	Yes

3. Step-by-Step Flow Implementation

Step 1: Get Account

Element: Get Records

- Label: Get Account ● Object: Account
- Condition:
    - Name Equals {!varAccountName}
- Sort: CreatedDate DESC
- Store: Only first record

Step 2: Assignment (Store Account Id)

Element: Assignment

- Label: Store Account Id

Set:

- varAccountId = {!Get_Account.Id}

Step 3: Get Ticket Record

Element: Get Records

- Label: Get Ticket
- Object: Support_Ticket_Intelligence__c
- Condition:
    - Customer__c Equals {!varAccountId}
- Sort: CreatedDate DESC
- Store: Only first record

Step 4: Assignment (Store Ticket Id)

Element: Assignment

- Label: Store Ticket Id

Set:

- varTicketId = {!Get_Ticket.Id}

Step 5: Decision (Analyze Description)

Element: Decision

- Label: Analyze Description

Outcomes:

High Priority

- Description contains:
    - "urgent"
    - "not working"
    - "failure"

(Use multiple conditions with CONTAINS)

Medium Priority

- Description contains:
    - "issue"
    - "slow"
    - "delay" **Default**

Outcome

- Low Priority

Step 6: Assignment (Set Priority Level)

High Path

- varPriorityLevel = "High"

Medium Path

- varPriorityLevel = "Medium"

Low Path

- varPriorityLevel = "Low"

Step 7: Decision (High Priority Check)

Element: Decision

- Label: Is High Priority

Condition:

- varPriorityLevel Equals "High"

Step 8: Create Task (Only High Priority)

Element: Create Records

- Object: Task

Set Fields:

- Subject = "Urgent Ticket Handling" ● WhatId = {!varTicketId}
- Priority = High
- Status = Not Started

Step 9: Assignment (Assign Agent Name)

Element: Assignment

- Label: Set Assigned Agent

Set:

- varAssignedTo = "Senior Support Agent"

Step 10: Optional SLA Check

Decision: SLA Risk

Condition example:

- If Created Date older than 2 days Then:
- (Optional internal flag or message)

Step 11: Final Output Message

Element: Assignment

- Label: Set Final Message Set varActionMessage:
- High:
  "High priority ticket detected. Assigned to senior agent."
- Medium:
  "Ticket marked as medium priority. Will be handled shortly."
- Low:
  "Tickets are low priority and queued for processing."

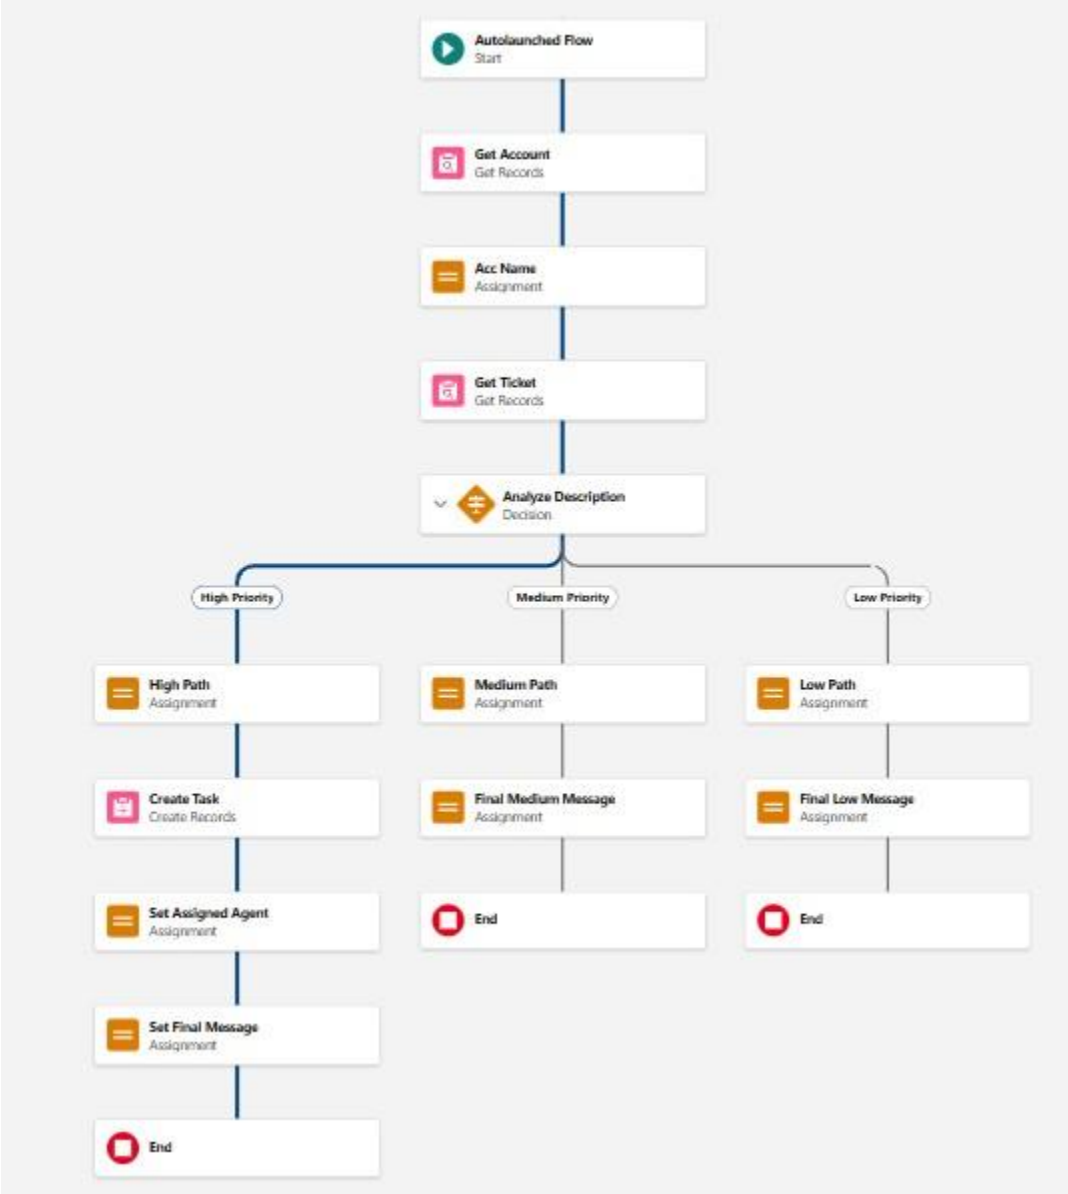

Step 12 : Save Flow

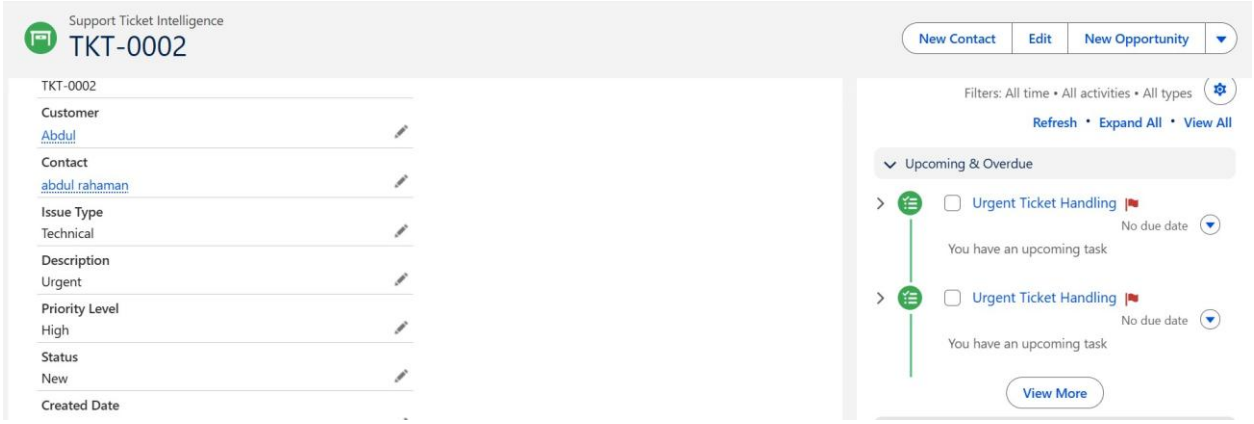

Label Name : Support_Ticket_Intellegence
Active Flow

4. Final Flow Structure

Start
→ Get Account
→ Assignment (Account Id)
→ Get Ticket
→ Assignment (Ticket Id)
→ Decision (Analyze Description)
→ Assignment (Priority Level)
→ Decision (High Priority)
→ Create Task
→ Assignment (Assigned Agent)
→ Optional SLA Decision
→ Assignment (Final Message)
→ End

Flow OutPut :

Autolaunched Flow
Start
Get Account
Get Records

5. Final Outcome

- Takes **Account Name as input**
- Fetches latest support ticket
- Analyzes description using keywords
- Sets priority automatically
- Creates task for urgent cases
- Returns output to Agentforce

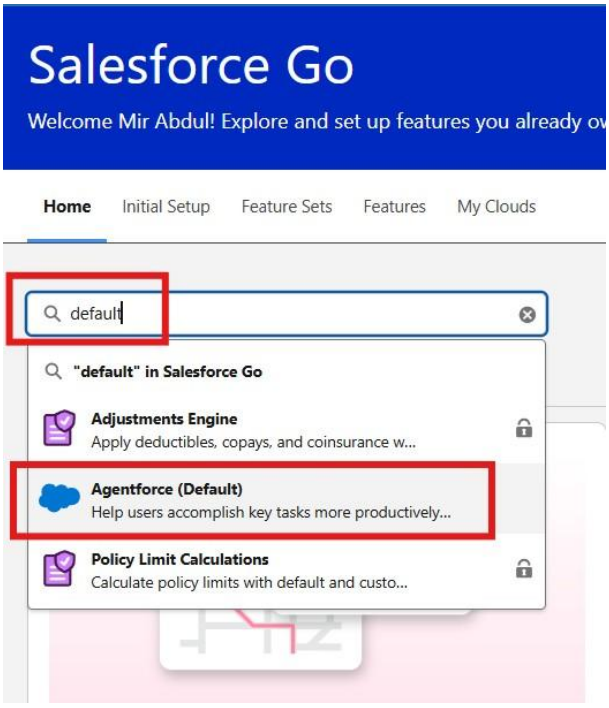

Agentforce Configuration

Steps :

1. Go to Gear icon and Click Salesforce Go

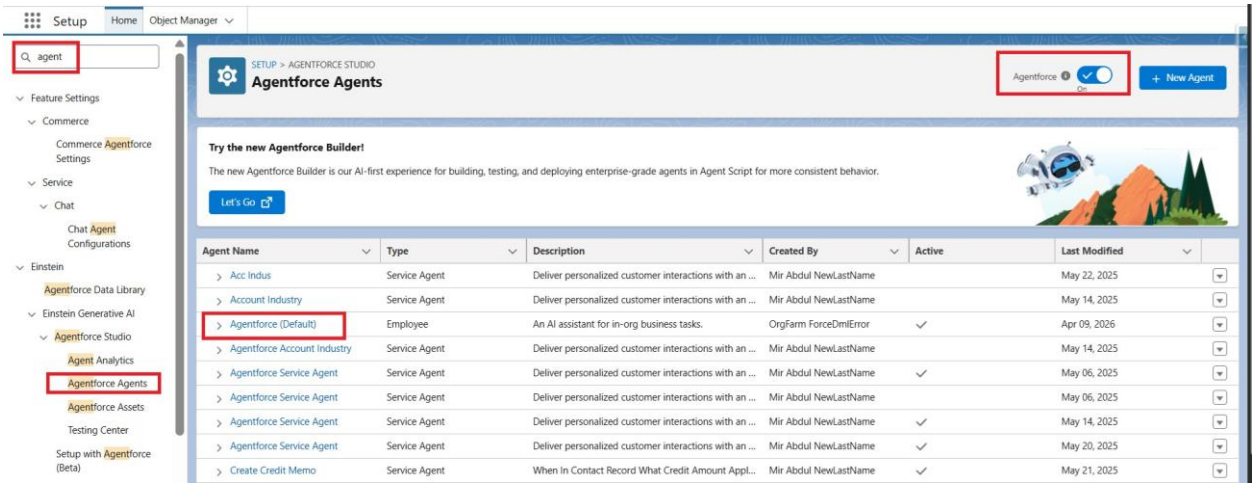

2. Search Default and Select Agentforce Default then Enabled It

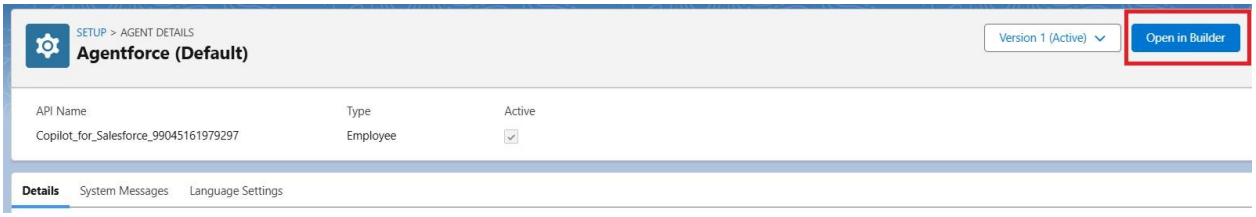

3. Select Get Started ⇒ Turn On ⇒ Confirm

4. Search Agents in Quick Find Box and Enabled The Agent then you will see Default Agent

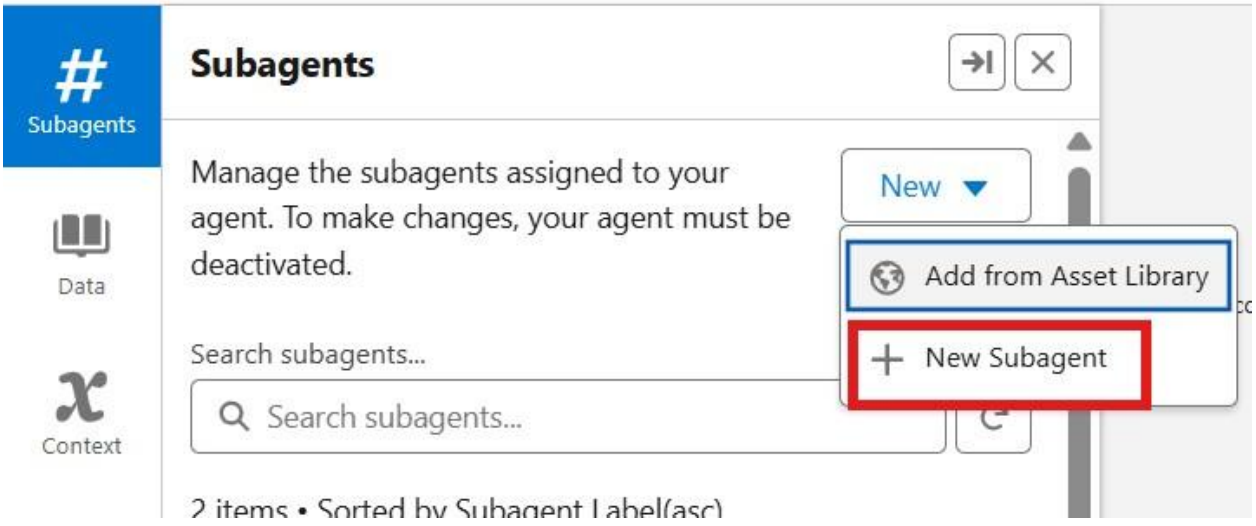

5. Select Default Agent and Click Open in Builder

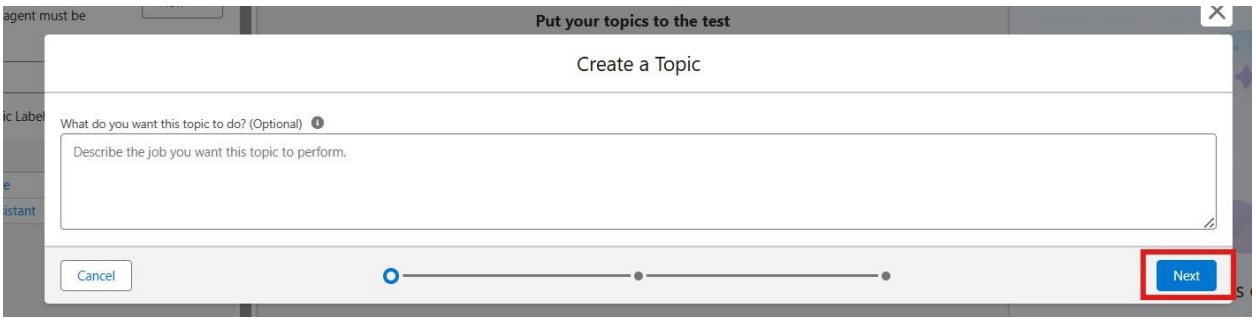

6. Click New to Create New SubAgent

7. Click Next

Agentforce Subagent Configuration

Name

Support Ticket Priority Analysis

API Name

Support_Ticket_Priority_Analysis

Classification Description

This topic analyzes customer support tickets to determine priority based on issue description and urgency. It handles user requests related to ticket status, issue severity, and support prioritization.

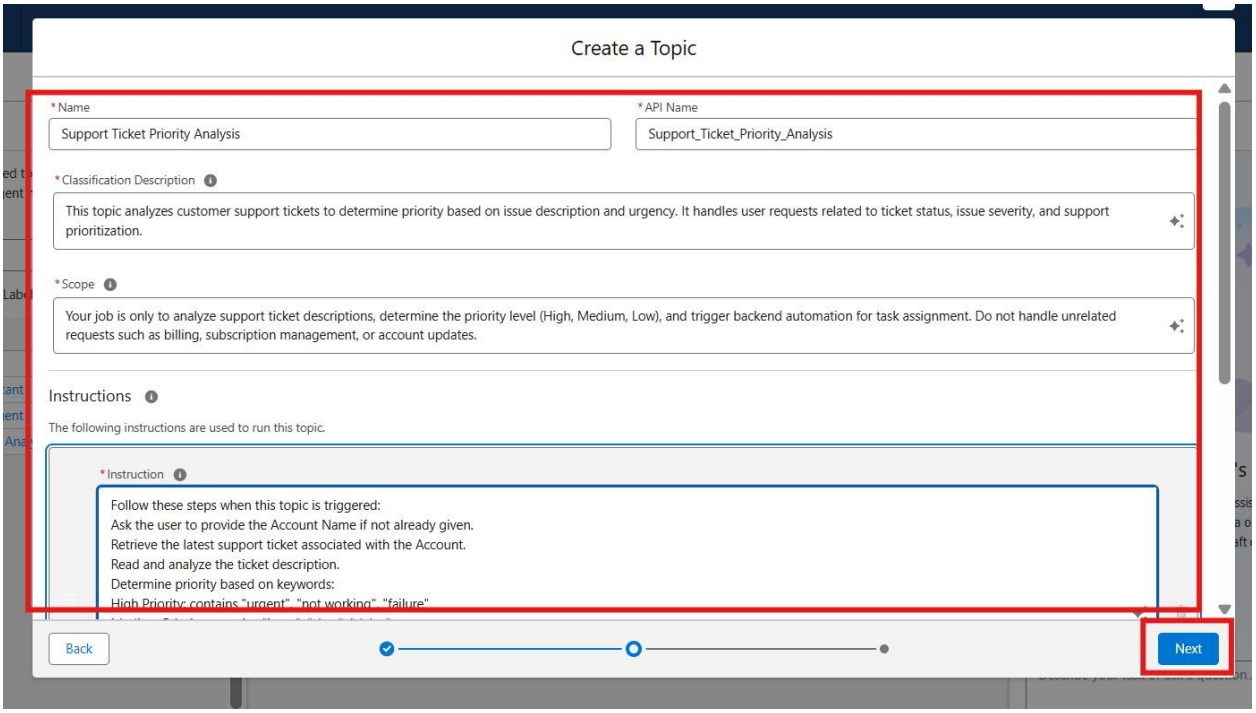

Scope

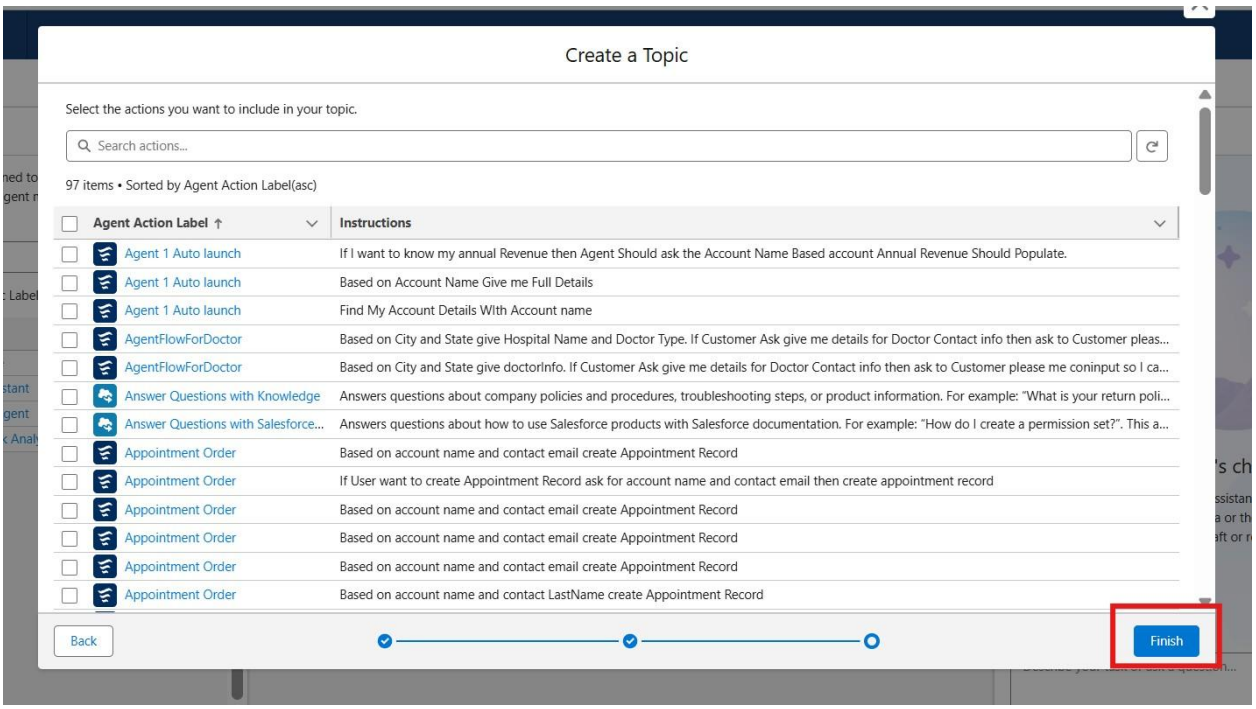

Your job is only to analyze support ticket descriptions, determine the priority level (High, Medium, Low), and trigger backend automation for task assignment. Do not handle unrelated requests such as billing, subscription management, or account updates.

Instructions

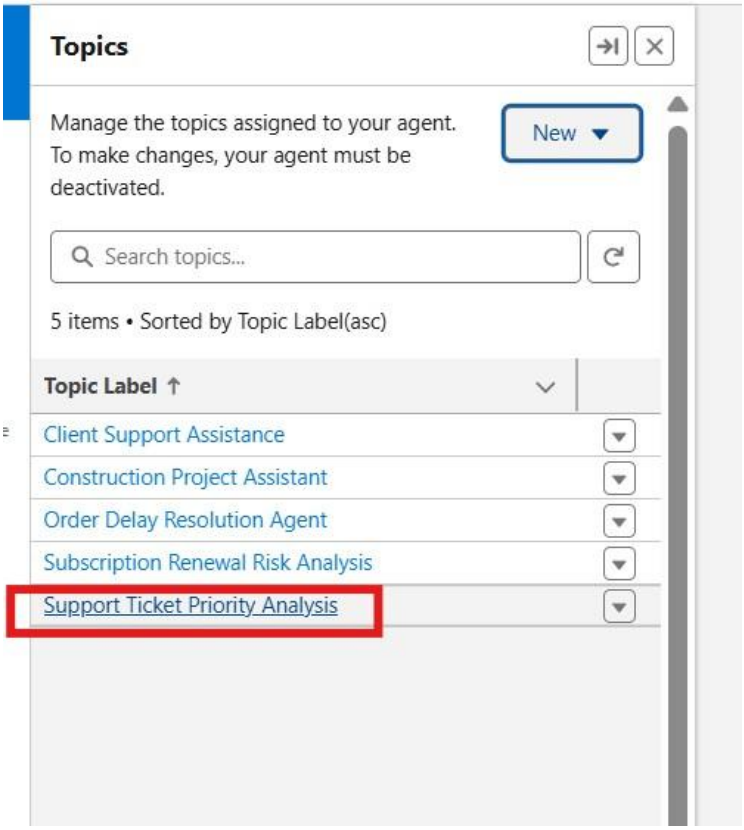

Follow these steps when this topic is triggered:

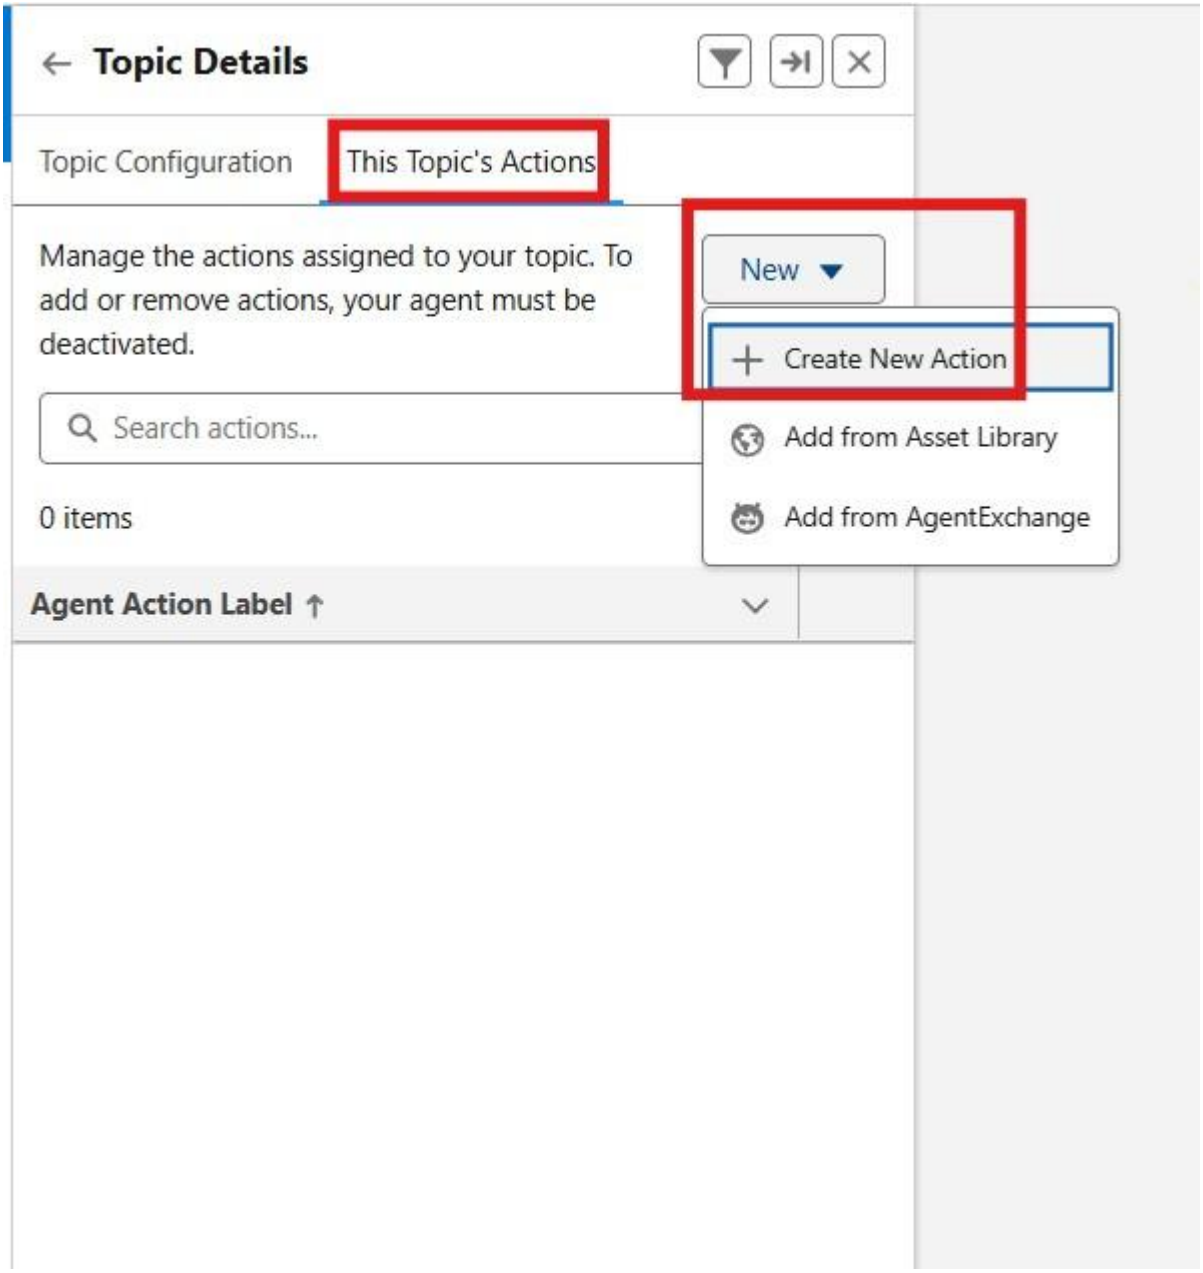

1. Ask the user to provide the Account Name if not already given.
2. Retrieve the latest support ticket associated with the Account.
3. Read and analyze the ticket description.
4. Determine priority based on keywords:
    - High Priority: contains "urgent", "not working", "failure"
    - Medium Priority: contains "issue", "slow", "delay"
    - Low Priority: if none of the above
5. Set the priority level accordingly.
6. If the ticket is High Priority:
    - Trigger the Auto-Launched Flow
    - Ensure a task is created for immediate handling
7. Assign the ticket to the appropriate support level (e.g., senior agent for high priority).
8. Return a clear response message to the user:
    - High → Inform urgent handling is initiated
    - Medium → Inform issue will be handled shortly
    - Low → Inform ticket is queued
9. Do not update records directly or send emails. Use Flow for all actions.

Agent Action Label

Actions are how an agent gets things done. To create an agent action, start with the functionality you already have in Salesforce, such as flows or prompt templates. Select an action you want the agent action to reference, and then configure it for use with an agent.

Agent Action Description

Analyzes customer support tickets based on the provided account name, determines ticket priority using issue description, and triggers automation to assign tasks for high-priority cases.

Loading Text

Analyzing ticket details and determining priority...

Input

varAccountName

- **Description**
  Enter the customer account name to fetch the latest support ticket and analyze its priority.
- **Data Type**
  lightning__textType
- **Require Input**
  Enabled
- **Collect Data From User** Enabled

Outputs

varAccountId

- **Description**
  Returns the unique identifier of the customer account used to retrieve the support ticket.
- **Data Type**
  lightning__textType
- **Show in Conversation**
  Enabled
- **Output Rendering**
  Text

varActionMessage

- **Description**
  Displays the final message indicating ticket priority and actions taken by the system.

- **Data Type**
  lightning__textType
- **Show in Conversation**
  Enabled
- **Output Rendering**
  Text

varAssignedTo

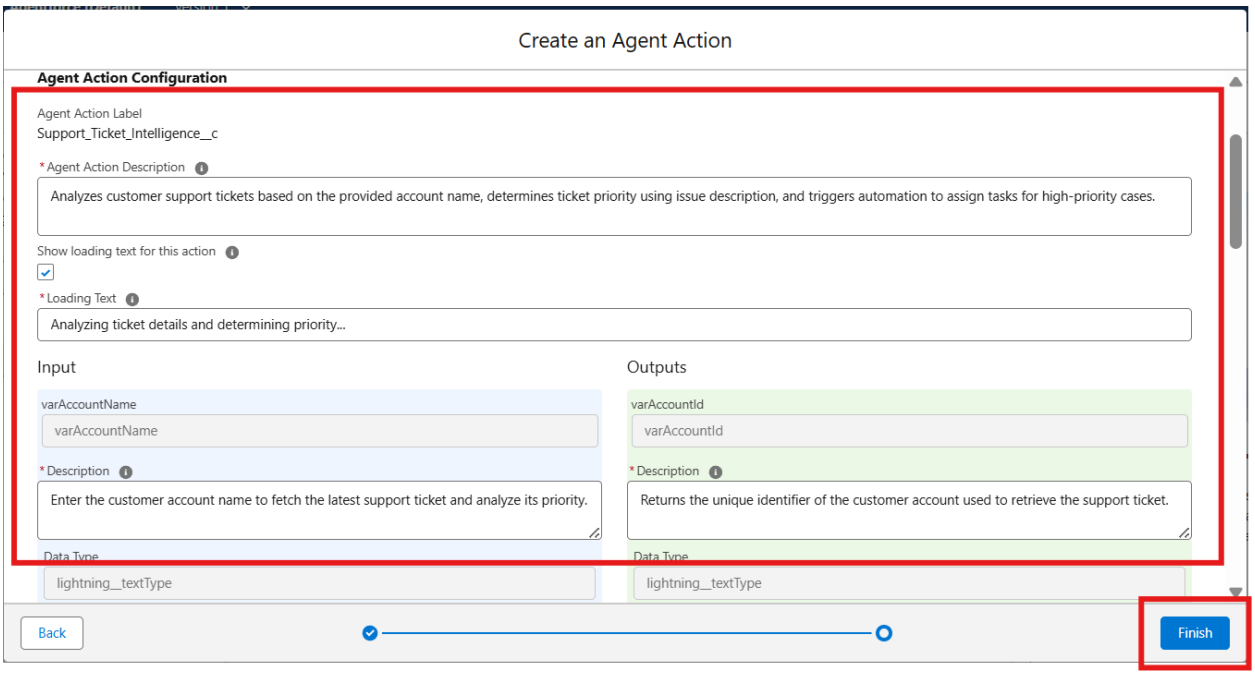

- **Description**
  Indicates the support agent or team assigned to handle the ticket.
- **Data Type**
  lightning__textType
- **Show in Conversation**
  Enabled
- **Output Rendering**
  Text

varPriorityLevel

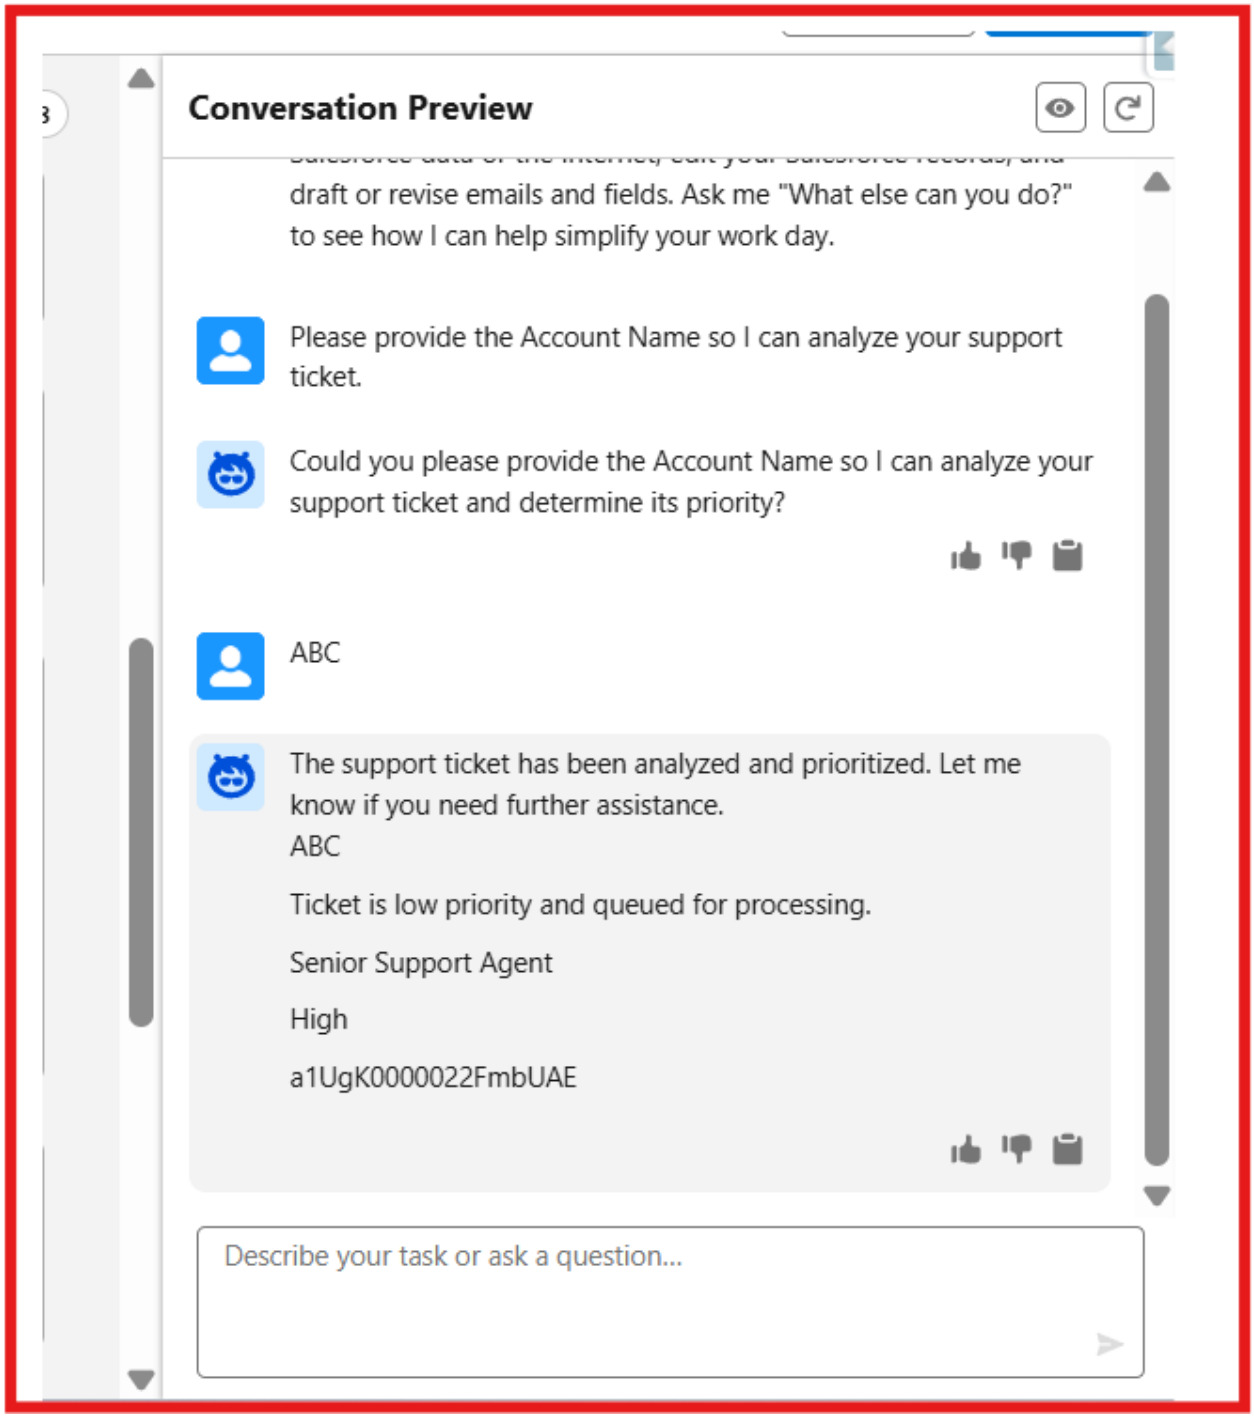

- **Description**
  Represents the calculated ticket priority level (High, Medium, Low) based on issue description.
- **Data Type**
  lightning__textType
- **Show in Conversation**
  Enabled
- **Output Rendering**
  Text

varTicketId

- **Description**
  Returns the unique identifier of the support ticket analyzed by the system.
- **Data Type**
  lightning__textType
- **Show in Conversation**
  Enabled
- **Output Rendering**
  Text

Final OutPut :

Note: If you would like to extend this scenario, you can add more variables to the flow and configure them in the agent. This will help you achieve better outputs. It's a great way to learn. If you'd like to explore more scenarios, feel free to get in touch with me.

7. FUNCTIONAL & PERFORMANCE TESTING

During testing, screenshots were captured from Salesforce to validate vehicle creation, dealer assignment, stock validation triggers, order status updates, batch processing, scheduled reminders, and dashboard analytics. All features were verified to ensure correct functionality and performance.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Automatic Ticket Prioritization – Classifies support tickets as High, Medium, or Low based on ticket description.
- Faster Identification of Critical Issues – Helps support agents focus on urgent tickets first.
- Reduced Manual Effort – Automates ticket analysis, priority setting, task creation, and assignment.
- Intelligent Ticket Handling – Agentforce analyzes ticket details and initiates the appropriate backend automation.
- Automatic Urgent Task Creation – High-priority tickets automatically create an Urgent Ticket Handling task.
- Improved Support Assignment – Assigns High-priority tickets to the appropriate support level, including a senior support agent.
- Conversational Support – Support users can interact with Agentforce to analyze ticket information and receive the outcome.
- Better Response Time – Automation helps reduce delays in handling critical customer issues.
- SLA Risk Awareness – The solution can check older unresolved tickets for potential SLA breach risk.
- Scalable Support Operations – Salesforce automation can support increasing volumes of support tickets.
- Improved Team Productivity – Reduces repetitive work and allows support teams to concentrate on ticket resolution.

Disadvantages

- Keyword-Based Priority Logic – The documented priority classification depends on configured keywords such as urgent, not working, failure, issue, slow, and delay.
- Limited Understanding of Context – The current implementation may not capture every possible urgency signal because the documented logic is based on configured conditions.
- Dependence on Accurate Ticket Data – Correct Account, Contact, and ticket information is required for successful analysis.
- Flow Configuration Dependency – Changes to ticket handling require maintenance of the Auto-Launched Flow and its logic.
- Agentforce Configuration Dependency – Agentforce responses and actions depend on properly configured subagent instructions and Flow actions.
- Limited Scope of Agentforce – The documented Agentforce subagent is focused on ticket analysis, priority determination, and backend automation; unrelated requests such as billing or subscription management are outside its scope.
- SLA Monitoring is Limited – The current implementation includes an optional SLA-risk check rather than a comprehensive SLA monitoring and escalation solution.
- Assignment Logic May Need Expansion – Additional support teams or more sophisticated assignment rules would require further configuration.
- Maintenance Required – Priority keywords, Flow variables, Agentforce outputs, and assignment logic may need to be updated as support requirements evolve.
- Limited Analytics in Current Scope – Advanced analytics for priority trends and resolution performance are identified as future scope rather than part of the current implementation.

9. Conclusion:

The Customer Support Ticket Priority Prediction and Automated Assignment System demonstrates how Salesforce Flow and Agentforce can work together to reduce manual support-ticket handling. The solution retrieves the latest ticket for an Account, analyzes its description, classifies priority, creates an urgent task for High-priority cases, assigns a support level, and returns a clear conversational response. This supports faster ticket handling, reduced manual effort, intelligent prioritization, and better team productivity.

10. FUTURE SCOPE

- Add more priority indicators and business rules.
- Extend Agentforce outputs with additional ticket information.
- Add more sophisticated SLA monitoring and escalation.
- Support additional support teams or assignment rules.
- Introduce analytics for priority trends and resolution performance.
- Add more variables and configure them in the Agentforce action for richer outputs.

11. APPENDIX

- A. Custom Object: Support Ticket Intelligence
- B. Key Salesforce Records: Account, Contact, User, Task
- C. Flow: Support_Ticket_Intellegence – Auto-Launched Flow
- D. Agentforce Subagent: Support Ticket Priority Analysis
- E. Agentforce Action: Flow-based Support Ticket Intelligence action

Thank You
